

## WOOD REPAIRS

### Industrial Foam

An exceptionally strong closed cell system which can be used on almost all building surfaces including concrete, brick, plaster, wood, metal, PVC and painted surfaces.

Industrial Foam is the heavy duty answer to filling gaps in and around pipe work, ducting, insulating, floors, doors, window frames, roofing and many other applications.

- Simple to use
- Rapid curing
- Tremendous strength
- Excellent adhesion
- Closed cell

### Woodform

A pre-coated catalyst fibrous wood combined with a resin reactor to produce an incredible high strength mouldable wood, which once cured can be drilled, machine sanded, planed or even tapered.

Woodform will adhere to all types of wood and most building materials including brick, concrete, steel, asbestos, plastic, marble, formica, etc.

- Tremendous flexural & compressive strength
- Easy to use & rapid curing
- Superb adhesion
- Resistant to fungus, bacteria & water
- Does not shrink

Now available in Epoxy Putty Repair Sticks.

### High Strength Wood Adhesive Woodbond EXP

Robex Wood Bond EXP is a high strength moisture curing Polyurethane adhesive especially designed for bonding wood to wood. Ideal for use in the bonding of wooden doors and window frames, structural adhesion of garden furniture and general furniture construction.

Wood Bond E.X.P can also be used to bond many types of plastic foams and other insulating materials to a wide variety of both rigid and flexible building boards.

- Single component for ease of use
- Suitable for hard and soft woods
- Will bond uneven surfaces
- Tremendous bond strength
